FIG. 19 is a schematic diagram of a device 100 in a closed position, showing a top view of the device 100. The device 100 is a rectangular frame with a central opening 10. The frame is composed of two main sections, 101 and 102, which are joined at a hinge 131. The hinge 131 is located at the top of the device 100. The hinge 131 is shown in a cross-sectional view, revealing its internal structure. The hinge 131 is a multi-layered structure, with a central core 132 and outer layers 133 and 134. The core 132 is a solid material, while the layers 133 and 134 are made of a flexible material. The hinge 131 is shown in a closed position, where the two sections 101 and 102 are joined together. The device 100 is shown in a closed position, with the central opening 10 being a rectangular shape. The device 100 is shown in a closed position, with the central opening 10 being a rectangular shape. The device 100 is shown in a closed position, with the central opening 10 being a rectangular shape.

FIG. 37 is a schematic diagram of a device 10 in a closed position. The device 10 includes a main body 11 and a cover 12. The main body 11 has a front panel 14 and a rear panel 16. The cover 12 is hinged to the main body 11 at a hinge 120a. The hinge 120a includes a hinge pin 121 and a hinge plate 122. The device 10 is shown in a closed position, with the cover 12 covering the front panel 14.
